Document revision level

The document corresponds to the version/revision level effective at the time of system delivery. Revisions to hardcopy documentation are not automatically distributed.

Please contact your local Siemens office to order current revision levels.

Disclaimer

The installation and service of equipment described herein is to be performed by qualified personnel who are employed by Siemens or one of its affiliates or who are otherwise authorized by Siemens or one of its affiliates to provide such services.

Assemblers and other persons who are not employed by or otherwise directly affiliated with or authorized by Siemens or one of its affiliates are directed to contact one of the local offices of Siemens or one of its affiliates before attempting installation or service procedures.

HCC information for ARCADIS Avantic

General information

Acronyms and abbreviations

AE title	Application entity title
BU	Business unit (modality)
DCS	DICOM conformance statement
DICOM	Digital imaging and communication in medicine
HW/SW	Hardware/software
HCC	Hardcopy camera
LAN	Local area network
LUT	Look up table
OEM	Original equipment manufacturer
SCP	Service class provider
SCU	Service class user
TCP/IP	Transfer control protocol/Internet protocol

Restrictions and known effects

NOTE	The DICOM camera parameter for "color appearance" has to be set to "grayscale 12 bit" in the DICOM print device menu step 3. (Filming properties)

NOTE	The "correction LUT" for the "XAImage" "image type" has to be set to "XaCorr16b-bspline" in the platform for "LUT files".

NOTE	The "Interpolation for printing" has to be set to "Bilinear" in the platform for "LUT files".

NOTE	Print the SMPTE test image to check the modality and camera adjustment according to the description and compare the results to the values in the reference value table for a max. density of 3.00.

NOTE	Sending film sizes that are not available at the customer site may cause problems at the camera site. For this reason, it is recommended that you delete these film sizes for portrait and landscape formats in the platform for "Filming Properties".

NOTE	While the Grayscale Standard Display Function (GSDF) will be supported for printing (Presentation LUT), it is currently not supported for the monitor. As a result, the Presentation LUT is not released.

NOTE	Since the monitor cannot use GSDF, the DICOM presentation LUT is not released.

NOTE	The use of the presentation LUT has to be disabled by local service for the configuration of LUT files.

NOTE	The density values for the image quality were measured using a calibrated densitometer X-Rite 301. The measurement result of the other densitometer may differ from the absolute density values indicated in the tables.

NOTE	The DICOM basic color print function is not released.

Errors and warning messages

Only certain errors and warnings have been tested for each hardcopy camera.

These errors and warnings are described in the corresponding specific camera information.

.

Scope of applicability

Modality/system

Device type	Modality (SCU)
Product name	ARCADIS Avantic
HW revision	Fujitsu Siemens PC, Celsius M410
Manufacturer	Siemens Medical Solutions
SW revision	VB13 (syngo-based VD30A)
Conformance statement	Syngo VD20J, D.C.S., May 23, 2003

Hardcopy cameras

This table includes all hardcopy cameras using DICOM basic print.

Manufac-turer	HCC name	Software validity			
		VB13	V...	V....	V....
AGFA	Drystar 5500	X			
AGFA	Drystar 5302	N/A			
AGFA	Drystar 3000	X			
AGFA	LR5200 / MG 3000	X			
CODONICS	Horizon	n.a.			
FUJI	Drypix 7000	X			
FUJI	Drypix 3000	X			
FUJI	Drypix 1000	X			
FUJI	FM DPL / FN-PS 551	X			
KODAK	DryView 8900	X			
KODAK	DryView 8700-Plus / PACS Link MIM 200	X			
KODAK	DryView 8200 / PACS Link MIM 200	X			
KODAK	DryView 8150	n.a.			
KODAK	DryView 8100 / PACS Link MIM 200	X			
KODAK	KELP 2180 / PACS Link MIM 200	X			
KONICA	DryPro 751 / 752	n.a.			

X = Hardcopy camera is released

n.a. = Hardcopy camera is not released

NOTE	**The use of non-released combinations of hardcopy cameras and BU products is prohibited and does not meet the specified requirements.**

DICOM associations

A DICOM association is a network connection between 2 DICOM applications. The association is established and released by the SCU and may be aborted by the SCU or SCP. The maximum number of associations for each HCC device is defined in the DCS. The maximum number of associations depends on the configuration and may be expanded by increasing the number of gateways connected to the printer device.

In a DICOM network environment, there are two possibilities for connecting a modality (SCU) to an HCC device (SCP).

Case 1: The association is always opened. Assuming that this behavior applies to all modalities (connected to the same HCC device), the number of modalities has to be equal to or less than the maximum number of supported associations.

Case 2: The association is opened (and closed) on demand. Assuming that this behavior applies to all modalities (connected to the same HCC device), the number of modalities may be greater than the maximum number of supported associations. This number is shared by the modalities.

For each SIEMENS modality, the association open-close behavior is fixed. For other non-SIEMENS modalities, this behavior is unknown. Under optimal circumstances, the number of modalities is equal to or less than the maximum number of supported associations.

The association is always opened by SCU (case 1)

If the associations are always opened by the SCU for each configured HCC device, the association is reserved for this SCU only.

If the maximum number of associations = 1 and another modality never releases the association, this HCC device is always reserved for this modality.

The association is opened and closed on demand (case 2)

The associations are opened (and closed) by SCU on demand for each configured HCC device with a product name.

Special cases (compare also to case 1):

If the number of modalities configured in the HCC device is greater than the maximum number of supported associations, printing will not function for some modalities. The printing function depends on the access time and the release mechanism of each connected modality (e.g., the maximum number of supported associations = 1, the number of modalities = 2. During the access time of the first modality, access of the second modality is denied and connectivity fails and vice versa).

If other modalities do not release the associations, the shareable number of associations decreases.

Modality

Hardware and software prerequisites

All hardware and software prerequisites are included in the <modality> product delivery volume.

Parameters

For software configuration, HCC data/parameters and possibly additional film matrix properties (syngo: filming properties) are required.

Modality data and configuration parameters

Properties	Example	Supplier
Port number	104	Default entry
AE title	PR_"Hostname"	Default entry
TCP/IP address	xxx.x.x.xxx	Network administrator

HCC data and configuration parameters[1]

1 The values of these parameters are part of the specific HCC information

Example: Kodak DryView 8300

Application entity Properties	Display	Supplier
AE title	K8300	Network administrator or HCC service
Port number	5040	HCC service

HC device/ general settings		Display	Supplier
Type		DICOM printer	Default entry
Class (printer spec. file name)		kodak8300	Default entry
DICOM node		dv8300	Default entry

Filming properties		Display	Supplier
Hold printed film jobs		10	Default entry
Min. density		20	Default entry
Pixel size [1/1000 mm]		85.0 x 85.0	Default entry
Film sheet formats, portrait	Number of pixels [columns x rows]	8" x 10" 2256 x 2676	Default entry
Film sheet formats, landscape	Number of pixels [columns x rows]	8" x 10" 2736 x 2136	Default entry

Filming properties		Display	Supplier
Medium type		Blue film	Default entry
Film destination		Processor	Default entry
Color appearance		Grayscale 12 bit	Default entry
Background		Black	Default entry
Transformation		No magnification	Default entry

Film matrix properties

The settings for filming properties depend on the class selected (DICOM camera). A pull-down menu for DICOM-class cameras is provided. Select your DICOM camera type. A specific file for this type is loaded and the "filming properties" are shown. Changing the "filming properties" will affect the camera site and may not meet the requirements. Do not make any changes, unless instructed otherwise.

> **NOTE** **The filming properties are the "pixel size" and "media sheet size"; this data is required for image scaling and cannot be changed.**

Software configuration

- The following information is required:
    - Host name
    - TCP/IP address
    - Application entity title
    - Port number of the DICOM remote host (DICOM laser camera)

The AE title, port number and camera type must be provided by the local camera service.

Syngo software configuration and laser camera

1. Select options in the menu line
2. Go to Local Service

    ⇨ The Siemens Service Software Authentication platform appears

3. Enter the password and click "OK"

    ⇨ The Syngo Service Software Home Menu Platform appears

4. Click "configuration"

    ⇨ The Local Service Configuration List of system options appears

5. Click DICOM "General"
6. Click ">"

    ⇨ The local Application Entity Title platform appears

7. Provide the Local Camera Service with the information in the field "Print (SCU) AE Title PR_"Hostname"

8. Click "Save"; ">"; "Finish"

   ⇨ The Configuration Setup platform appears

9. Click Local Host "TCP/IP LAN"

   ⇨ The local Service Configuration TCP/IP LAN Platform appears

10. Provide the Local Camera Service with the information in the field "IP address" (scroll down menu for IP address but do not select it)

11. Click "Finish"

    ⇨ The Configuration Setup platform appears

12. Select DICOM Print Devices

    ⇨ The Local Service Hardcopy Device platform appears

13. Enter the host name and TCP/IP address of the laser camera (provided by the camera manufacturer)

14. Click "Test" to test IP communication (ping)

15. Click "Save"

    ⇨ Host properties successfully saved

16. Click "OK"

17. Click ">"

    ⇨ The General Note Properties Dialog Platform appears

18. In Logical Name: Enter the logical name of the laser camera

19. Select the Host and choose the host name previously defined in the Hardcopy device platform

20. In Application Entity Properties: Enter the AE title in the "Edit AE title" field (provided by the camera manufacturer)

21. Enter the port number (provided by the camera manufacturer)

22. Click "Add"

23. Click "Save"

    ⇨ DICOM node properties successfully saved

24. Click "OK"

25. Select the logical name again and click "Verification" to test DICOM communication (mc3echo)

26. Click ">"

    ⇨ The Camera Specific Parameters platform appears

27. HC device: Enter the camera name

28. General settings: /Type: DICOM printer

29. /class: see specific HCC Information or e.g. agfadrystar3000

30. Filming properties:

- Hold printed film jobs:

(default is 10; maximum 10 films can be printed again)
- Min density:

(default is 20; can be changed in increments of 0.1)
- Pixel Size: (changes not allowed)
- Film Sheet Formats Portrait/Landscape:

(Do not modify and/or add film sizes, select and delete film sizes that are not available on-site)
- Medium type:

blue film; clear film; paper (default value depends on the class used)
- Film destination:

processor; magazine (default value depends on the class used)
- Color appearance:

Color 24 bit; Grayscale 8 bit; Grayscale 12 bit (default value is grayscale 8 bit)
select "Grayscale 12 bit"
- Background :

black or white (default value is black)
- Transformation:

replicate; bilinear; cubic; no magnification (default value is no magnification)

31. Click "Save"

⇨ Caution: Please wait for the message "device properties successfully saved"

32. Click "OK"

33. Click "Finish"

⇨ The Configuration Setup platform appears

34. Continue by clicking ">" and select the next DICOM "HC Overview" marked

35. Click "Finish"

⇨ The Configuration Setup platform appears

36. Click LUT files

⇨ The LUT platform appears.

Image type	Correction LUT	Max. density
XA Image	XaCorr16b-bspline (recommended LUT)	**3.00**

NOTE	**If new LUT files for one or more modalities are available on a removable medium, e.g., floppy or CD, these files can be selected on the source drive and copied to the dependent LUT directories on the local host. LUT files that are not needed can be removed from the LUT directories on the local host.**

37. Click ">"

⇨ Usage of Presentation LUT platform appears

Siemens AG
Medical Solutions
SPR2-330.814.20.01.02
10.05
Page 13 of 108
CS SD 24
ARCADIS

38. Select disable

39. Modifications are necessary for additional image impressions only.

40. Overall Maximum Density:

   - 3.00 (default)

NOTE	**The parameter acts as an LUT scaling relative to the setting of max. density of each LUT (and acts also on the density values digitally transferred to the HCC). LUT will be downscaled if this parameter is set to a value greater than the LUT / max. density. Parameter value has no impact on the LUTs which have max. density values that are the same. Parameter value less than one LUT / max. density setting is not defined. (Please note : the measurement of optical density requires the value 3.50 (3.00) for LUT / max. density as well as for overall max. density).**

41. Interpolation for printing: (changes not allowed)

   - **Bilinear** (default)
   - Replicate
   - Cubic #Smoothing Type 0, 2, 3, 4 concerns cubic mode only

42. When changes are made, click "Save"

43. Click "Finish"

44. Click "Home"; the system automatically restarts the application

NOTE	**This may take some time. Confirm warnings with "OK."**

Image quality and optical density check

General image quality information (LUT)

Only the standard LUT files are loaded. For importing/removing additional/unnecessary LUT files (see the "Additional/unnecessary LUT files" section).

The image data from the modality to the HCC is transformed/corrected by the LUTs, once in the modality and once in the HCC. As a result, the LUT must be set on both sides:

- See Siemens Medical Solutions Intranet UPTIME Services
- Product-specific technical documentation

Required LUT settings

Modality	Image type	Correction LUT	Max. density
ARCADIS system	XAImage	XaCorr16b-bspline	3.00
	SCImage	XaCorr16b-bspline	3.00
HCC	See "DICOM printer settings" in the specific camera information. Settings are made by the HCC service; **"LINEAR LUT"**		

Density verification

There are two possibilities for checking the LUT via the film density:

The modality is configured to a specific correction LUT and the HCC is configured to linear curves, or the modality is configured to linear LUT and the HCC is configured to linear curves.

Density verification

Check no.	Verification for	Modality adjustment			Reference value
	ARCADIS system	Image type	LUT	Max. density	
1	Desired density	XAImage	XaCorr16b-bspline	3.00	See the table for XaCorr16b-b spline
2	HCC linearity	XAImage	Linear	3.00	See table for linear LUT

These two checks are equivalent; checking the "specified density" is sufficient.

Checking "HCC linearity" may be necessary if the desired density verification (1) shows deviations and the HCC setting needs to be changed.

NOTE	**Even if the HCC service does not require a test image of the modality for the HCC setting, it is easier to check this setting - and possibly further HCC corrections - with the HCC linearity verification (2) than with the desired density verification (1). Only the HCC linearity LUT is effective. A graphical display would only show the current HCC behavior, which could be helpful for the HCC service.**

Density values

- Measure the density values in 11 gray levels in the SMPTE test image (for each film size).

  W:4095; C:2047;
Fig. 2:   *12-bit test image*

Tab. 1   Reference value for max. density 3.00

Step	XaCorr16b-bspline (LUT)			Linear LUT		
	Ref. LUT	**Maximum density**	**Minimum density**	**Ref. LUT**	**Maximum density**	**Minimum density**
1	0.20	0.23	0.17	0.20	0.23	0.17
2	0.31	0.35	0.27	0.47	0.51	0.44
3	0.42	0.47	0.37	0.76	0.80	0.72
4	0.56	0.62	0.50	1.03	1.09	0.98
5	0.73	0.79	0.67	1.32	1.38	1.26
6	0.93	1.00	0.86	1.59	1.66	1.53
7	1.15	1.23	1.07	1.88	1.95	1.81
8	1.43	1.51	1.35	2.17	2.24	2.09
9	1.82	1.91	1.73	2.45	2.54	2.36
10	2.30	2.40	2.20	2.73	2.82	2.63
11	3.00	3.10	2.90	3.00	3.10	2.90
	Modality is configured to XaCorr16b-spline - LUT, Printer is configured to linear LUT.			Modality is configured to linear - LUT. Printer is configured to linear LUT.		

Refer to ARCADIS Avantic. Perform the image quality quick test and log the density values measured in the field of 0%, 40%, and 100% for positive and negative image presentation.

Reference film

Reference films

To verify the required image quality, create a reference film and compare the measured density values of the film with the density values in the table above.

Refer to

- Siemens Medical Solutions Intranet UPTIME Services
- Product-specific technical documentation

or follow the short description below.

Reference film with technical images

Verify the **desired** LUT adjustment, please follow this procedure:

Prerequisite configuration for desired LUT adjustment (default setting)

Modality	Image type	Correction LUT	Max. density
ARCADIS system	XAImage	XaCorr16b-bspline	3.00
HCC	See "DICOM printer settings" in the specific camera information. Settings are made by the HCC service; **"LINEAR LUT"**		

Required configuration for linear LUT adjustment

Modality	Image type	Correction LUT	Max. density
ARCADIS system	XAImage	Linear or nothing selected	3.00
HCC	See "DICOM printer settings" in the specific camera information. Settings are made by the HCC service; **"LINEAR LUT"**		

1. The layout is configurable under option/configuration/filming layout

2. Use format 1.1; default center/width; for the film sheet

3. The service test images (test patient) are in patient browser under local database in the Service patient browser. Open and log onto syngo service. When this is done, the test patient becomes visible in the browser.

   Use test images (technical images) without text and the two medical test images with text and print the film sheet. (the DICOM command to printer is always "Bilinear - magnification "); Trim = on.

4. Print the reference film with the following test images:

   SMPTE-Testimage1 IMA1 / EDGE enhancement = 0%,

5. Measure SMPTE test image and verify the XaCorr16b-bspline - LUT using the "density values" table

   Segment layout:

   ┌─────┐
   │ 1 │
   └─────┘

Segment	Image	Window	Center
1	(ASPIA) SMPTE-Testimage1 IMA1 / E=0%,	1024	1024

6. Repeat this procedure with the **linear** LUT setting

7. If the test images are not available, load the test images from the "Test images" ARCADIS CD.

Description of correction LUT files

Description of correction LUT files

Correction LUT for XA image	LUT files with $D_{min.}$ 0.2 and $D_{max.}$ 3.00
Nothing selected	Linear LUT
Linear	Linear LUT
xa	Standard LUT; default for all cameras
barten 300-16bin	For bone white display
xrfCorr16b-bspline	Standard LUT for XA images; increased pixel depth, improved gray value resolution and homogeneity

Additional and unnecessary LUT files

If new released LUT files are available on a removable medium (e.g., floppy or CD), these files may be selected on the source drive and copied to the dependent LUT directories on the local system. Unnecessary LUT files may be removed from the LUT directories on the local system.

Importing LUT files

1. In the local service configuration platform, select LUT files
2. Select the (source) drive and the path where the appropriate LUT (xaConfig16b-bspline.lut") files are located (path C:\ASPIA\config\HC\Lut\XAImage)
3. Select the destination LUT directory (correction LUT directory) which depends on the image type (XAImage).
4. Pushing the copy button transfers the selected LUT file to CTImage type.
5. Repeat this procedure using the appropriate LUT files for **SC images.**
6. Select the destination LUT directory (correction LUT directory) which depends on the image type (SCImage).
7. Pushing the copy button transfers the selected LUT file to SCImage type.
8. Confirm the message "files successfully copied" by clicking "OK"

Removing LUT files

Unnecessary LUT files can be removed from LUT directories on the local host by selecting the appropriate LUT file and clicking the 'remove' button.

- Click ">"

Real size scaling

n.a.

Error and warning messages

General about error and warning messages

If the association is not available, is broken, or the network is not available, the user shall be informed and corrective actions shall be performed as necessary.

The following tables document the behaviors of the DICOM print AE in response to messages received for the printer SOP class and the print job class.

Message regarding film job status and error handling

Definitions of camera symbols

Idle or running: Camera symbol
Camera is installed and ready; idle icon is displayed.

Interact: Camera symbol is marked with a cross and with !
The user must react soon but not immediately.
Example: A camera was low on 8x10 clear sheets: LOW 8x10 CLR was sent by n-event-report.

Film job has failed or queue stopped: Camera symbol with a cross and X
The user must react immediately. Either the camera needs immediate attention or a job has been aborted.
Example: A camera is out of 8x10 clear sheets, the camera is down, or a film job has been aborted.

Different camera symbols are displayed according to the printer status info.

Message string visible in the status bar	Description	Other action for syngo/camera symbol
Connection to camera is not available	Camera is not connected/network is not available	The icon for printing is marked with a cross. The queue is stopped

Error/warning messages (examples)

Warning or error messages of camera	Message sent by SCP (*1)	Displayed message on SCU (*2)
Supply magazine empty	EMPTY 8X10	8x10 film supply empty
Supply magazine empty	EMPTY 11X14	11x14 film supply empty
Supply magazine empty	EMPTY 14X17	14x17 film supply empty
(*1) See all messages in the DCS of the hardcopy camera		
(*2) See all messages in the DCS of the modality		

NOTE	**Reporting errors and warnings requires conformance level 1, but it does not function as specified : The warning messages do not conform with DICOM. If the syngo/camera symbol is always a cross but printing is possible, the Siemens default printer setting conformance level 1 is in use. The recommended setting is conformance level 0 (refer to printer setting) in which only errors are reported.**

Image quality and optical density

No specific parameter available.

Real size scaling

n.a.

Fuji FM DPL/FN-PS551

General information

Block diagram
Fig. 14:

Available film sizes

Application		Release status	Film type	Medium type
14" x 17"	Portrait	Yes	DI-AL	Blue-based
	Landscape	Yes	DI-AL	Blue-based
14" x 14"	Portrait	n.a.	n.a.	n.a.
	Landscape	n.a.	n.a.	n.a.
11" x 14"	Portrait	Yes	DI-AL	Blue-based
	Landscape	Yes	DI-AL	Blue-based
8" x 10"	Portrait	Yes	DI-AL	Blue-based
	Landscape	Yes	DI-AL	Blue-based
Other		n.a.	n.a.	n.a.

Restrictions

NOTE	For HCC-independent restrictions, refer to **(Restrictions and known effects / p. 6)**.

NOTE	Additional labeling and trim have been switched off.

NOTE	Only one camera connection to FN-PS551 was used for the qualification.

NOTE	Maximum number of associations supported: 6

NOTE	The background command works fine.

SCU/modality software configuration

Application entity Properties	Display	Changes allowed
AE title	FMDPL	Yes
Port number	104	No

HC device/ general settings		Display	Changes allowed
Type		DICOM printer	No
Class (Printer spec. file name)		fujifmdpl	No
DICOM node		FMDPL	Yes

Filming properties		Display	Changes allowed
Hold printed film jobs		10	Yes
Min. density		20	Yes
Pixel size [1/1000 mm]		100 x 100	No
Film sheet formats, portrait	Number of pixels [columns x rows]	14" x 17" 3460 x 4168 11" x 14" 2536 x 3522 8" x 10" 1952 x2 410	In "Define new" Do not modify/add Select only Delete only
Film sheet formats, landscape	Number of pixels [columns x rows]	14" x 17" 4200 x 3360 11" x 14" 3560 x 2440 8" x 10" 2464 x 1898	
Medium type		Blue film	Yes

Filming properties		Display	Changes allowed
Film destination		Processor	No
Color appearance		Grayscale 12 bit	No
Background		Black	Yes
Transformation		No magnification	No

NOTE	Do not modify and/or add film sizes.
	Do not modify pixel sizes.
	Delete film sizes that are not available at the customer site.

SCP/hardcopy camera configuration (provided by OEM)

Identification

Device type:	DICOM print server/printer
Device name:	**FN-PS551**
Manufacturer:	FUJI photo film
SW revision:	**A 06**
Physical interface:	100/10 base - T Ethernet, UTP/STP
Network protocol:	TCP/IP
DICOM conformance statement:	FN-PS551 May 2001, 4th Edition
Image memory:	6GB (128 MB)
Hard disk:	3 Gbyte
Number of inputs:	1 Ethernet - board
Number of outputs:	1 SCSI-PEI01A board (FUJI-DMS protocol)
Number of operating panels:	1 PC keyboard

Device type:	**DICOM camera**
Device name:	**FM - DPL**
Manufacturer:	FUJI photo film
SW revision:	**W01-02 (main unit)**
Physical interface:	SCSI interface

Network protocol:	None
DICOM conformance statement:	None
Image memory:	192 MB
Hard disk:	None
Number of inputs:	1
Number of outputs:	n.a.
Number of operating panels:	1 built-in keypad

Printer settings

File name	Content	Remarks
None	**FUJI service utility setting**	**Provided by FUJI**
	Function	Properties
	Protocols: DICOM	Network port no. = 104
		Data transfer timeout = 600 sec.
		Print server application entity = one for each printer
		Data receive if the printer is offline = enable
	Printer: FMDPL	Properties
	Name:	AE title of DICOM = FMDPL
		Fine printing = off
	Interface:	Interface = E-i/f
		Pixel clock = 1.0 µsec/pixel
		Version = Type 1
		Film size = 14x17 (dimmed)
		Film medium = blue (dimmed)
	Model:	Model = FN-PS551
		Manufacturer = FUJI PHOTO FILM CO, LTD
	Clients: DICOM: MERGE_PRINT SCU	Properties
	Name:	Hostname = MERGE_PRINT SCU
		IP address = (from system administrator)
